Yoyo Implementation

Ahmed Farooqui 300334347

Introduction

The yoyo algorithm which is used to elect a leader in a connected graph was implemented.

The 5 major steps involved were the following:

- 1. Creating a directed graph and marking the sources, sinks and internal nodes.
- 2. Yo-up
- 3. Yo-down
- 4. Edge Pruning
- 5. Edge Flipping

The steps were iterative which concluded its execution when only the leader remained.

The color code adopted was green for source, blue for internal node and red for sink.

Implementation Details

The Networkx and Matplotlib Library were used to visualize the algorithms.

The input of the graph was an adjacency list. An example is shown below

graph = {2: [14], 3:[13,9, 10], 4:[13,11], 5:[11,10,9], 7:[11, 14], 9:[3, 5, 10], 10:[3,5,9,11], 11:[4,5,7,10,12], 12:[11], 14:[2, 7], 13:[3, 4]}

Issues Involved

The major issue involved while formulating the logic were

1. An internal node received at least one no should send a no to all ancestor edges.

This issue was circumvented by identifying all the ancestors of the internal node and setting their labels to no.

Source Code

```
import matplotlib as mpl
import matplotlib.pyplot as plt
import networkx as nx
graph = \{2: [14], 3: [13,9, 10], 4: [13,11], 5: [11,10,9], 7: [11, 14], 9: [3, 5, 1], 13: [13,9, 10], 14: [13,11], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,10,9], 15: [11,1

Sample Output

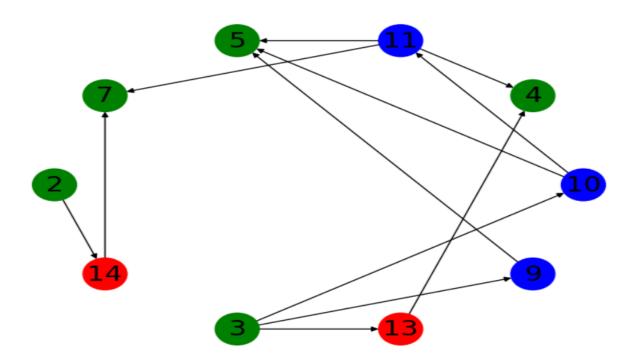

For the graph displayed above, the first iteration of each of the steps is given below.

Iteration 0

The following image represents the final iteration of the algorithm which ceases to run when only a single node, that is the leader is elected.

Iteration 8

2 → 14
